

Energy theft

Last Updated 15/05/24

Energy theft

Energy theft is tampering with a meter or its connections. This means the meter doesn't accurately record how much electricity is being used.

A tampered meter is unsafe and can be extremely dangerous. It puts the safety of people living in the property and their neighbours at risk.

Energy theft is not a victimless crime. Energy theft increases costs, resulting in higher bills which affects everyone. Energy theft is paid for by you.

Tampering with gas or electricity meters isn't just dangerous – it's illegal. Share Energy are supporting the Consumer Council, to raise awareness about the consequences of energy theft.

If you suspect energy theft is occurring, it can be reported by contacting the UK Revenue Protection Association (UKRPA) on **028 9575 7206**
